

THE MODERN DATA STACK

February 2025

Forecasting Cloud Costs Proactively (and Accurately)

Ready to leave behind reactive spending for proactive optimization? Accurately forecast cloud expenses with granular visibility, control over usage, and the ability to optimize code and infrastructure for cost and performance. Say goodbye to unexpected budget overruns, missed performance SLAs, and inefficient resource allocation.

SAY HELLO TO 5 STRATEGIES

Discover the Most Important FinOps Metrics

Is your team measuring your cost per query, cost per pipeline, and data-to-insight time? Dive deep into advanced strategies for optimizing costs and maximizing ROI in your data environments. Watch Advanced Cost Optimization Techniques for Databricks to understand advanced cost optimization techniques, balancing performance and cost, and best practices for FinOps.

Control Your Databricks Cloud Costs

Ready to optimize Databricks costs? Take control of your Databricks expenses in 30-minute sessions. From automating cost management with AI to designing efficient ETL pipelines, and scaling data operations within budget to align data teams with financial goals, you can master cost predictability in these bite-sized, drop-in sessions.

Building a FinOps Ethos in Your Data Engineering Team

Is your data engineering team mindful of costs? Transform your approach to cloud cost management by democratizing cost visibility, embedding cost intelligence into development and operations lifecycles, and fostering a culture of continuous improvement. Discover how Unravel's 'actionability for everyone' approach makes cost awareness as natural as code quality or data accuracy.

3 STEPS TO BUILD

Optimize Your Data Environment with a Free Health Check

Where does it hurt? Databricks costs are complex, and it is challenging to pinpoint precisely where (and why) cost overruns occur. Uncover hidden savings and supercharge your data platform performance with a complimentary health check report. Our AI-powered analysis acts like a personal trainer for your data environment, identifying wasted costs, poorly performing workspaces, detailed cost allocations, and optimization opportunities.
